

# PREMIUM XLS EXPLOIT CREATION GUIDE

## AUTOLOG FREEBIE

### Code Compatibility

- ✚ Compatible with any version of MS Office 1997-2016
- ✚ Link <http://YourSite.com/YourStub.exe> or <http://YourSite.com/YourStub.jar> in the exploit builder
- ✚ We highly recommend having a private server for linking files directly.
- ✚ The matter that it doesn't download directly from chrome or doesn't execute due to SmartScreen is **not** a concern. We use a private webclient and don't need to face SmartScreen prompts at all.

### Creation Guide

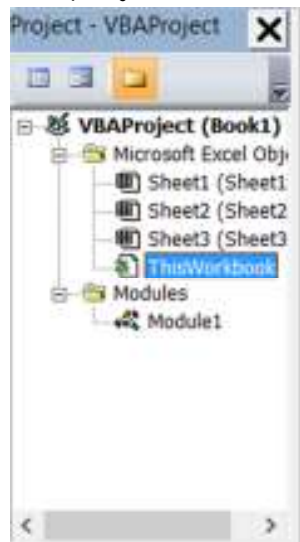

This step involves creating the exploit by copy-pasting the altered code from the first page with your stub link within MS Excel itself. The generated file is compatible with all versions of MS Excel except Starter Trial Pack of 2016 which doesn't support Macros.

Follow the steps below **exactly in order** to make the exploit:

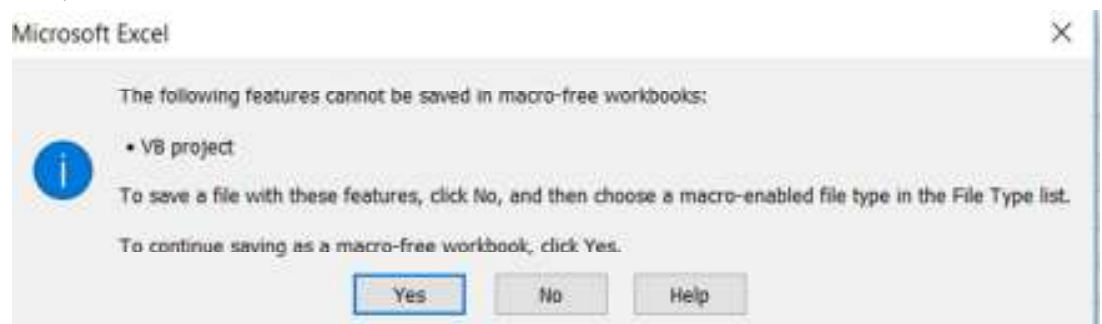

- ❖ Open Microsoft Excel
- ❖ Click on "View" tab and then Macros -> Record Macro.
- ❖ Without clicking anything, just click on Macros again and "Stop Recording" option
- ❖ Now click on "View Macros" and "Edit" the existing Macro1 (name by default), doing so the VBA window will pop up.
- ❖ Make sure the main content is just this:

```
Sub Macro3()  
'  
' Macro3 Macro  
'  
'  
End Sub
```

- ❖ Now, look on the Project Explorer tab to the left of the screen. Click on "ThisWorkbook" project there

- ❖ Copy-paste your macro code within this prompt and hit Ctrl+S to save your excel spreadsheet.
- ❖ On saving, you will get a prompt that asks whether to save it as a macro free workbook or not,

Click on "No" and select the .xls extension

**Highly preferred:** Excel 97-200X Workbook (.xls)
