

PREMIUM DOC EXPLOIT CREATION GUIDE

AUTOLOG FREEBIE

Code Compatibility & Creation

- ✚ Link <http://YourSite.com/YourStub.exe> or <http://YourSite.com/YourStub.jar> in the builder & get the code
- ✚ We highly recommend having a private server for linking files directly.
- ✚ The matter that it doesn't download directly from chrome or doesn't execute due to SmartScreen is **not** a concern. We use a private webclient and don't need to face SmartScreen prompts at all.

Step 2: Creating the Exploit

This step involves creating the exploit using MS Word. The created exploit will work on all versions of MS Word with Macro Support (except Starter/Demo Pack of 2016 that doesn't have Macro Support).

To create the exploit, you need to follow the flowchart:

- Click on "View" tab
- Click on Macros -> View Macros
- Click on Create Macro (replacing any existing macros)
- Now navigate to the "Project Explorer" tab on your left. Click on Project (YourDocumentName, by default Document1)
- Expand it and click on Microsoft Word Objects.
- Double click on ThisDocument
- Copy and paste the complete code here
- Click on Ctrl+S and close the entire new Macro Editor / VBA Explorer.
- When you get this prompt, click on "No" and select any extension of your choice (preferred: .doc or .docm)

Your exploit is ready

Highly preferred form of saving: Word 97-200X Document (.doc)
